PROFESSIONALS RELY ON K-RAIN IN OVER 63 COUNTRIES.

Shouldn't you?

K-Rain® is one of the world's foremost manufacturers of gear-driven rotors, sprinklers, sprays, controllers and valves for the commercial and residential irrigation markets. With more than 90 patents and over 30 years of industry experience, our advanced design and engineering have made K-Rain products the easiest to install, set and use.

K-Rain has been exceeding expectations in the harshest proving ground, the field, for over 30 years. The natural setting of the real world is the perfect testing facility for our industry leading irrigation products. We didn't read the book on turf irrigation, we wrote it.

K-Rain began with a vision. Beginning with design of an automatic irrigation control system for his home, K-Rain founder Carl Kah currently holds over 90 patents specific to the industry. This was the foundation of K-Rain – our history. Today over 300 men and woman make up the K-Rain team, serving customers in the United States and across the globe.

Beyond any technical advancement, these people are at the heart of all we do. We are proud to say *"We love what we do. Everyday we go to work with one thought: Make it better."*

FACT

K-RAIN pioneered the flat blade screw driver method of rotor adjustment in 1989.

K-RAIN MINIPRO™ MODEL 13003

The MiniPro is a gear-driven, rotary type sprinkler, capable of covering an area of 17' to 30' (5.2 to 9.1 M) radius at nozzle pressure of 30 to 50 PSI (2.1 to 3.4 bar) with a discharge rate of .75 to 3.3 GPM (2.84 to 12.5 LPM). The MiniPro is supplied with five (5) numerically coded interchangeable nozzles. Sprinkler nozzle trajectory is 26°. The sprinkler has a stainless steel radius adjustment screw.

The MiniPro provides arc adjustment from 40° to 360°. Sprinkler arc setting adjustment is carried out by rotation of a flat blade screwdriver within top cover adjustment slot. Sprinkler coverage pattern is indicated by degree graduations and an arrow located on top of the sprinkler. The MiniPro is adjustable in all phases of installation (i.e., before installation, after installation while static, and after installation while in operation).

K-RAIN founder Carl Kah, holds over 90 patents specific to the irrigation industry. Notable patents include the reversing mechanism and K-RAIN's arc set indicator.

K-RAIN PROPLUS™ MODEL 11003

The ProPlus is a gear-driven, rotary type sprinkler, capable of covering an area of 22' to 50' (6.7 to 15.3 M) radius at nozzle pressure of 30 to 70 PSI (2.0 to 5.0 bar) with a discharge rate of .5 to 10.0 GPM (1.89 to 37.85 LPM). The ProPlus is supplied with nine (9) numerically coded interchangeable nozzles. Sprinkler nozzle trajectory is 26°. The ProPlus is supplied with four (4) numerically coded interchangeable low angle nozzles. Low angle nozzle trajectory is 12°. The sprinkler has a stainless steel radius adjustment screw.

The ProPlus provides both part and full circle adjustment from 40° to 360°. Sprinkler coverage pattern is indicated by degree graduations and an arrow located on top of the sprinkler, which rotates to correspond with arc selected. True full circle operation by continuous forward rotation is achieved by alignment of the indication arrow with the "360°" position locator marked on the top cover. The sprinkler has a friction-clutch mechanism to allow for 360°+ forward or reverse movement of nozzle turret without damage to the internal gear components. The ProPlus incorporates an "arc memory clutch" feature to allow original arc pattern to be automatically resumed following disturbance of nozzle turret setting. The sprinkler has a minimum of 5-inch (12.7 cm) pop-up stroke and a 3/4-inch female thread inlet.

THE ROYAL MIRAGE

United Arab Emirates

One of the premier resorts in the UAE, the Royal Mirage is located on a 1km by 5km lush parcel on the Arabian Gulf. Local irrigation and landscape contractor, Desert Landscape Company, installed K-Rain rotors and sprinklers throughout the property.

The maintenance free integrity and sturdy construction of the product were the keys to choosing K-Rain for this project.

London-based Fitco Industries Ltd., distributes K-Rain products throughout the Middle East and supports their distributors with ongoing warranty and technical advice.

K-RAIN PROCOM™ MODEL 15003

The ProCom is a gear-driven, rotary type sprinkler, capable of covering an area of 22' to 50' (6.7 to 15.3 M) radius at nozzle pressure of 20 to 90 PSI (1.4 to 6.2 bar) with a discharge rate of .5 to 10 GPM (1.89 to 37.85 LPM). The ProCom has a patented manual flow shut-off. The sprinkler is supplied with nine (9) numerically coded interchangeable nozzles. Nozzle trajectory is 26°. The ProCom is supplied with four (4) numerically coded interchangeable low angle nozzles. Low angle nozzle trajectory is 12°. The ProCom has a stainless steel radius adjustment screw.

The ProCom provides both part and full circle adjustment from 40° to continuous 360°. Coverage pattern is indicated by degree graduations and an arrow located on top of the sprinkler, which rotates to correspond with arc selected. True full circle operation by continuous forward rotation is achieved by alignment of the indication arrow with the "360°" position locator marked on the top cover. The rotor has a friction-clutch mechanism to allow for 360°+ forward or reverse movement of nozzle turret without damage to the internal gear components. The ProCom incorporates an "arc memory clutch" feature to allow original arc pattern to be automatically resumed following disturbance of nozzle turret setting.

The PROCOM has a minimum of 4-inch (10 cm) pop-up stroke and a 3/4-inch female thread inlet.

The PROCOM is available in stainless steel.

FACT

K-RAIN'S new product concepts are developed, manufactured and tested in its Riviera Beach, Florida manufacturing facility. Harsh sun and sand conditions provide a natural proving ground for new ideas.

K-RAIN PROSPORT™ MODEL 14003

The ProSport is a gear-driven rotor capable of covering an area of 45' to 77' (13.7 to 23.5 M) radius at nozzle pressure of 40 to 90 PSI (2.76 to 6.21 bar) with a discharge rate of 5.9 to 32.5 GPM (22.3 to 123.0 LPM).

The ProSport is supplied with six (6) numerically coded interchangeable nozzles. Nozzle trajectory is 26° and incorporates three (3) discharge ports. The rotor has a stainless steel radius adjustment screw.

The ProSport provides both part and full circle adjustment from 40° to 360°. Coverage pattern is indicated by degree graduations and an arrow located on top of the sprinkler, which rotates to correspond with arc selected. True full circle operation by continuous rotation is provided by alignment of the indication arrow with the "360°" position locator marked on the top cover.

The rotor has a friction-clutch mechanism to allow for 360°+ forward or reverse movement of nozzle turret without damage to the internal gear components. The ProSport incorporates an "arc memory clutch" feature to allow original arc pattern to be automatically resumed following disturbance of nozzle turret setting.

The ProSport has a minimum of 4-inch (10 cm) pop-up stroke. The sprinkler has a 1-inch female thread inlet.

PRO SERIES 100 VALVE

A contemporary tilt diaphragm design makes the PROSERIES 100 Valve the perfect choice for residential and commercial applications. This reliable valve offers a straight through flow pattern that dramatically reduces pressure loss and reduces the risk of trapped debris that causes other brands to fail. It has both an internal bleed and external bleed in addition to optional flow control. The inside diameter (ID) is 1 inch slip and glue or NPT/BSP. The outside diameter (OD) is 1 1/4 inch slip for added installation flexibility

PRO SERIES 100 VALVE MALE THREAD X BARB

K-Rain expands the popular ProSeries 100 Valve line with the Male X Barb 1" Valve.

The Male X Barb Valve is designed for polyethylene piping systems, requires fewer fittings and can be installed quickly.

7001-MXB

FLOW THROUGH

The unique tilted diaphragm creates a better flow path than traditional globe style electric valves by decreasing friction loss and increasing flow rate.

SELF-CLEANING SCREEN

The straight flow path allows debris to move through and the turbulent water flow cleans the diaphragm filter screen. This provides long life in applications using well or lake water.

MANUAL FLOW CONTROL

Precisely adjust flow and shut off manually. Removable handle prevents tampering.

CAPTURED PLUNGER SOLENOID

K-Rain's solenoid with captured plunger allows for easy removal when servicing without losing internal parts. Epoxy encapsulated solenoid design ensures longevity unlike the competition's overmolded solenoid.

FEATURES/BENEFITS

- Heavy Duty, Corrosion and UV Resistant PVC Construction—Increases the life of the valve.
- Combination 1" and 1 1/4"—Provides the option to increase the pipe size to the valve increasing the flow rate.
- Tilt Diaphragm/Piston Assembly—Allows for a straight flow path of the water increasing the flow rate while reducing the friction loss.
- Debris Tolerant Design—Provides flexibility for use in potable or dirty water applications.
- Manual External Bleed Screw—Provides for manual operation in system start up.
- Manual Internal Bleed Through Solenoid—Provides for manual operation without discharging water outside the valve.
- Flow Control with Removable Handle—Allows for precise flow adjustment and manual shut off and allows you to remove the handle to prevent tampering (Except 7001-NFC).
- Captured Plunger—Allows for the solenoid to be removed without losing the internal plunger.
- Self Cleaning Metering Screen—Screen is in the turbulent flow of the water allowing self cleaning action during operation.
- Five Year Limited Warranty.

K-RAIN PROSERIES 100 MODEL 7001: ELECTRIC VALVE

Construction:

The valve body is constructed of corrosion and UV resistant PVC material. Valve is available in NPT, welded slip and BSP configurations. The valve is manufactured for 3 different applications:

1. to accept 1" female slip or 1 1/4" slip installation within the same unit.
2. to accept 1" female thread or 1 1/4" slip installation within the same unit.
3. to accept 1" female BSP thread or 1 1/4" slip installation within the same unit.

Design of valve is high flow, low friction loss and includes optional flow control for precise flow adjustment and manual shut off. Valve has debris tolerant design to accommodate dirty water conditions. Valve has a manual external bleed and removable tamper-resistant flow control handle. Valve has a diaphragm piston assembly with a 50 mesh filter screen in the turbulent flow for self-cleaning purposes. Valve is controlled by a 24 VAC encapsulated solenoid, .43 amp inrush and .25 amp holding.

Operation:

Valve has a working pressure range from 20 PSI (1.38 bars) minimum to 150 PSI (10.34 bars) maximum and a recommended flow range from 5 to 30 GPM (20 to 114 LPM).

RESISTANCE METHOD

Required Information

- Actual one-way length of wire between the controllers and at the power source of the controllers and valves
- Allowable voltage loss along the wire circuit
- Accumulative current flowing through the wire section being sized in amperes

Resistance is calculated using formula:

$$R = \frac{1000 \times AVL}{2L \times I}$$

R = Maximum Allowable Resistance of wire in ohms per 1000 feet

AVL = Allowable voltage loss

L = Wire length (one way)

I = Inrush current

AVL for controller power wire sizing is calculated by subtracting the minimum operating voltage required by the controller from the minimum available voltage at the power source.

AVL for valve wire sizing is calculated by subtracting minimum solenoid operating voltage from controller output voltage. This number will vary depending on the manufacturer and in some cases with line pressure.

VALVE WIRE SIZING EXAMPLE:

Given: The distance from the controller to the valve is 1800 ft. The controller output is 24V. The valve has a minimum operating voltage of 20V and an inrush current of 370 mA (0.37Amps).

$$R = \frac{1000 \times 4}{2(1800) \times 0.37}$$

$$R = \frac{4000}{1332}$$

$$R = 3.00 \text{ ohms/1000 feet}$$

Wire resistance can not exceed 3.00 ohms per 1000 feet. Go to table #1 and select the proper wire size. Since 16 gauge wire has more resistance than 3.00 ohms per 1000 feet, choose 14 gauge wire.

Table 2 is a quick reference and is set up to provide maximum wire runs given the information at the bottom of the table.

Note: ■ Shaded areas of the chart indicate velocities over 5 feet per second (FPS). Use with caution.

Velocity of flow rate values are computed from the general equation $V = .408 Q/d^2$

Friction pressure loss values are computed from the equation $[hf = 0.2083 (100/C) 1.852 Q^{1.852}/d^{4.868}] \times .433$ for psi loss per 100' of pipe.
